

**Amendments to the Specifications:**

Please replace paragraph [0048] with the following amended paragraph:

[0048] In addition, this invention is not limited to the case where individual concentrated beams reflected from mirrored surfaces 18 of reflecting elements 16 are superimposed and centered relatively to each other on receiver 24. Instead, the dimensions, curvatures and relative dispositions of elements 16 and surfaces 18 can be varied so that the respective beams can be made partially overlapped, contacting, or spaced apart, for example, to provide uniform irradiance distribution on receiver 24 apart.

Please cancel previously added paragraph [0048.1]

Please replace paragraph [0049] with the following amended paragraph:

[0049] There are also various other possibilities with regard to the dimensions, number and relative disposition of reflective elements 16, as well as individual curvatures of surfaces 18. ~~In addition, reflective elements 16 can be removably mounted on bands 13 or on any other suitable members of the support frame. Furthermore~~ In addition, one or more individual elements 16 can be selectively added, omitted, changed or replaced in concentrator 14 to provide the application-specific operation or desired dimensions.
